EXECUTIVE SUMMARY

The STEAME Teacher Facilitators Academy project, funded under the ERASMUS+ Teacher Academies action, has completed three years of implementation (2023–2026). Fourteen partner organisations spanning Cyprus, Poland, Portugal, Spain, Greece, Bulgaria, Romania, and Belgium collaborated to develop and promote an innovative pedagogical framework integrating Science, Technology, Engineering, Arts, Mathematics, and Entrepreneurship (STEAME) in European schools.

This report documents the full scope of dissemination and communication activities carried out by consortium partners across the life of the project. The data presented here is drawn exclusively from the continuous reporting records compiled by all 14 partners.

In total, the consortium delivered:

- 256 dissemination initiatives, including conference presentations, education and training events, meetings, clustering activities, and scientific publications;
- 923 communication actions across social media, newsletters, interviews, media articles, websites, and events;
- 94 organised events (workshops, training courses, webinars, conferences, festivals, and seminars) attended by more than 20.000 participants across Europe and beyond.

The project's reach extended to research communities, EU institutions, national and regional authorities, schools, teacher educators, university students, civil society, and the general public, making STEAME pedagogy increasingly visible and adopted across diverse educational contexts.

1. INTRODUCTION

The STEAME Academy project has established a comprehensive European framework for advancing STEAME education through innovation, teacher professional development, institutional collaboration, and international dissemination activities. Over the three-year implementation period (2023–2026), the consortium developed and promoted an extensive portfolio of educational methodologies, teacher training programmes, certification initiatives, scientific contributions, policy engagement activities, and public outreach actions designed to strengthen STEAME learning ecosystems across Europe and beyond.

This final report presents the impact and dissemination achievements of the project, documenting the breadth and depth of the communication, dissemination, exploitation, and stakeholder engagement activities implemented by the consortium partners. The report demonstrates how the project successfully combined academic dissemination, practitioner-oriented training, public engagement events, policy dialogue, and digital communication strategies to maximise visibility, sustainability, and long-term adoption of STEAME approaches.

The project achieved substantial outreach through a diverse range of dissemination formats, including international conferences, teacher certification programmes, workshops, webinars, festivals, summer schools, scientific publications, social media campaigns, institutional meetings, and policy-focused events. Across 94 major recorded events, the project engaged more than 20.000 participants, including teachers, students, researchers, educational authorities, policy makers, higher education institutions, and representatives of international organisations.

Among the project's most significant achievements were the successful organisation of the European STEAME Academies Conference and annual symposia, the Cyprus STEAME Festivals, annual STEAME Summer Schools, and the implementation of the STEAME Teacher Facilitators Certification programmes. These initiatives contributed to strengthening teacher competences, promoting interdisciplinary and creative pedagogies, and fostering transnational collaboration among educational stakeholders.

The dissemination strategy combined strong physical participation with continuous digital engagement. The project website achieved more than 106.000 page views, while social media activities generated sustained interaction and visibility across multiple countries and target groups. In parallel, the project established meaningful collaborations with higher education institutions, schools, educational authorities, regional stakeholders, and international networks, creating favourable conditions for the long-term sustainability and exploitation of project results.

The report also highlights the project's contribution to educational policy dialogue and institutional transformation. Through focus groups, validation workshops, policy recommendation events, and international meetings, the consortium actively promoted the integration of STEAME principles into educational systems and institutional practices. The project's international reach extended beyond Europe, engaging stakeholders in Africa and strengthening the global dimension of STEAME educational innovation.

Overall, this report demonstrates that the STEAME Academy project not only achieved strong dissemination performance and measurable impact indicators, but also established a sustainable and growing community of practice committed to advancing inclusive, interdisciplinary, and innovation-driven STEAME education.

2. DISSEMINATION

Dissemination, understood as activities aimed at showcasing, experimenting with, and spreading project outcomes to professional and academic audiences, was pursued intensively throughout the three years of implementation. Partners recorded 256 distinct dissemination initiatives, covering a wide variety of formats and audiences.

Dissemination activities were categorised into the following types, reflecting the varied forms in which partners engaged audiences with STEAME outcomes:

- Conferences and conference presentations
- Education and training events
- Meetings (institutional, bilateral, and network meetings)
- Clustering activities and EU-funded project collaborations
- Scientific publications and journal articles
- Webinars and online events
- Other outreach activities

All 256 initiatives recorded in the dissemination log were reported with a status of “Delivered”, confirming that every planned activity was completed.

2.1 Conferences and scientific presentations

Conference participation was the most prevalent dissemination format across all partners. Partners presented the STEAME Academy project and its intellectual outputs at a broad range of national and international scientific gatherings throughout 2023, 2024, 2025, and 2026.

Among the most significant conferences were:

- The European STEAME Conference 2026 and the Academy Symposia 2024 and 2025, were held annually at the EUROMATH & EUROSCIENCE Student Conference. The 2024 edition took place in Rome, the 2025 edition in Thessaloniki, and the 2026 edition in Paphos, Cyprus. Each symposium attracted hundreds of participants and provided a major platform for showcasing STEAME pedagogical research and certified teacher practices.
- Participation of P12-CYMS and P5-EACG at the AKSF International Meeting in Ohrid in October 2023, where the project was presented to 160 participants from 74 countries.
- Presentation at the 6th ERASMUS+ International Staff Week at the University of Piraeus in September 2024, where the STEAME Academy coordinator introduced the project's re-thinking of school learning.
- Presentation at the 12th international conference 'The ART of Teaching – Pathways to Innovation' in October 2024.
- Presentation at the IMEA'2024 scientific programme in November 2024 by Prof. Makrides.
- The PAN-Hellenic Conference in November 2025, where two online presentations were delivered covering STEAME PBL methodology and mathematics learning powered by STEAME pedagogy.
- Presentation at the European Commission Teacher Academy evaluation event in Athens in June 2025.
- P8 (University of Plovdiv) delivered conference talks at the International Scientific Conferences IMEA 2023 and IMEA 2024, as well as at the SREM 2025 Conference.

- P9 (University of Barcelona) presented at ICON-EDU in June 2024, the EASSH Conference in October 2024, and at the AAG Conference in April 2026.
- P5 participated in the ERACON 2024 Congress and Exhibition and the PAN-Hellenic Conference on Mathematics in November 2025.
- P4 (University of the Aegean) presented at Mediterranean Researcher's Night 2024 and at the University of the Aegean conference in March 2026.

Across all partners, conference presentations targeted primarily research communities, EU institutions, innovators, and specific user communities such as mathematics educators, geography educators, and science education specialists.

2.2 Education and training events

Education and training events formed a core dissemination channel, allowing partners to demonstrate STEAME methodologies directly to teachers, educators, and pre-service teaching students. These events ranged from certification seminars to structured workshops and curriculum presentations.

Key activities in this category include:

- Multiple rounds of the STEAME Teacher Facilitators Certification Programme in Cyprus, coordinated by P1-UKEN, P2-CYMS, P5-EACG and P10-PI, trained approximately 50 teachers in competence-based STEAME pedagogy from February to July 2025. The programme included an inaugural meeting at the Pedagogical Institute under the aegis of the Ministry of Education of Cyprus in March 2025.
- A Certification programme was held in Porto, P12-IPP, from the 7th to the 18th of July 2025, in parallel with the first Porto STEAME Summer School.
- Week 3 of the STEAME PBL Certification, in July 2025, during which over 40 teachers implemented co-created Learning & Creativity Plans with students in Agros, Cyprus, as part of the STEAME certification pathway.
- Dissemination of the STEAME Academy project to pre-service teachers and pedagogy students at the University of Barcelona by P9, including presentations to primary education degree students in March 2024, pedagogy students in February 2024, and secondary teacher training coordinators across Catalonia and the rest of Spain in December 2023.
- P9 (University of Barcelona) also presented key intellectual outputs — D2.4, D3.1, D3.2, and D4.2 — to students in the master's degree in school management in May 2025.
- P3 (University of Algarve/MILAGE) organised and participated in workshops on Module 5: Interactive STEAME Process for in-service teachers in multiple school clusters in Portugal, including the Boa Água, Michel Giacometti, and Sampaio school clusters in September 2025.
- P6 (Romanian partner) conducted workshops for in-service teachers to introduce the STEAME project and the future STEAME local academy, in May 2025.
- P8 (University of Plovdiv) conducted workshops for students and teachers in May 2025 at the Faculty of Mathematics and Informatics, as well as dissemination activities during an Erasmus mobility at Masaryk University, Brno.
- P10 (Cyprus Pedagogical Institute) carried out an extensive series of presentations and workshops for primary and secondary teachers, school vice-directors, directors, and science teachers throughout 2023, 2024, 2025, and 2026.
- P11 (Ivan Apostolov School, Bulgaria) organised special STEAME classes, teacher training sessions, and student project activities involving hundreds of students across multiple grades.
- P12 (IPP, Portugal) launched the Academia de Formadores de Professores STEAME, promoting the project across the IPP community.

2.3 Meetings and institutional engagement

A significant number of dissemination activities took the form of institutional meetings, both bilateral and network-level, through which partners shared STEAME outcomes with decision-makers, fellow researchers, and European stakeholders.

Notable meetings included:

- Participation in the DLEARN Network Meeting in Milan in January 2025, where the Federation of STEAME Teacher Facilitators Academies and the European STEAME Certification Micro-credential were presented.
- Representation of the STEAME Academy at the EU-level Teacher Academies meeting in Brussels in June 2025, where ideas and future plans were exchanged with other Teacher Academy projects.
- Presentation of STEAME pedagogy at the Serbian Academy of Sciences in May 2025, with the participation of academics and the Cyprus Ambassador.
- The AKSF International Meeting in October 2025, where the STEAME Academy project's results were disseminated internationally.
- Visit to the University of Senghor in Alexandria, Egypt, in October 2025, exploring the establishment of the first STEAME Regional Academy in Africa.
- The STE(A)M Education European Roadmap (THE SEER) Seminar in June 2024, a round table where the STEAME Academy coordinator participated alongside representatives of other European academies.
- P11 (Ivan Apostolov School) conducted meetings with the Bulgarian Minister of Education to discuss national curriculum changes and STEAME integration, and with the Bulgarian Association of Private Schools to promote multiplication of STEAME outputs.
- P9 (University of Barcelona) presented project results to the Erasmus+ Teacher Academies eTwinning group on the European School Education platform.

2.4 Clustering and cross-project collaboration

Partners engaged in clustering activities with other Erasmus+ and EU-funded projects, strengthening the project's connections within the European education ecosystem and maximising shared impact.

P3 (University of Algarve/MILAGE, Portugal) coordinated closely with the MILAGE LEARN+ platform, delivering the STEAME Student Authors feature in school clusters across Portugal. The STEAME Academy project was disseminated at the Real School Group in Braga, supported by Braga municipality, and recognised through the MILAGE LEARN+ School Seal awarded to Alto Minho Artistic Professional School (ARTEAM).

P9 (University of Barcelona, Sapin) shared the STEAME Curricula, including training modules and Learning & Creativity plans, with coordinators of pre-service teacher education programmes at the main universities across Spain in January 2024, and shared the project's policy recommendations deliverable (D6.1) through the Erasmus+ Teacher Academies eTwinning Group in April 2026.

P11 (Ivan Apostolov School, Bulgaria) linked STEAME training and certification activities to ongoing projects on sustainability, AI tools, and phenomenon-based learning, enabling cross-fertilisation of methodologies and resources through KA1 training courses in Helsinki, Prague, and Valencia.

P12 (Polytechnic Institute of Porto, Portugal) presented the STEAME teaching module on “Feedback and Reflection empowered by GenAI” at the eTwinning Webinar held in January 2026 by the Literacy, Media Literacy and Critical Thinking eTwinning Featured Group.

2.5 Scientific publications

Several partners contributed to the scientific knowledge base through journal articles and conference proceedings, enhancing the academic credibility and visibility of the STEAME approach.

dissemination journal for in-service teachers, in May 2024.

- P6 (Spiru Haret University) published an article on STEAME Learning Outcomes in a Romanian journal in May 2024.
- P7 (IDE) contributed with posts and articles on the STEAME learning outcomes for teachers.
- P8 (University of Plovdiv) produced a scientific publication in the proceedings of the International Conference SREM 2025.
- P9 (University of Barcelona) published an article about the project in DIM-EDU, an education social network for human development, and P11 (Ivan Apostolov School) maintained a regular blog and website article series documenting project progress.
- P12 (Polytechnic Institute of Porto) published a book chapter “Unveiling the Holistic Approach of the STEAME Teacher Facilitators Academy Project” at “Level Up! Exploring Gamification's Impact on Research and Innovation”, ISBN 978-1-83769-529-4.

3. COMMUNICATION

Communication activities, understood as actions aimed at raising awareness about the STEAME Academy project and its mission among broad and diverse audiences, represent the highest volume of recorded activities in the project. Partners logged 923 communication actions across the three years, using a variety of channels to reach different audience segments.

Partners deployed the following main communication channels:

- Social media (Facebook, LinkedIn, X/Twitter, Instagram), the most widely used channel across all partners;
- Newsletters, including the official STEAME Academy newsletters and partner institutional newsletters;
- Interviews with regional television and other media;
- Press releases and blog posts;
- Institutional and partner websites;
- Media articles in university and regional newspapers;
- Events (conferences, meetings, webinars, round tables) as communication touchpoints.

All 923 recorded communication actions were delivered or are ongoing, with the vast majority confirmed as “Delivered”.

3.1 Social media campaigns

Social media was the dominant communication channel across all partners, enabling rapid, wide-reaching dissemination of project news to diverse audiences including teachers, researchers, students, parents, and the general public.

P1-UKEN (coordinating partner) maintained the most active social media presence, with dozens of Facebook posts throughout 2023, 2024, 2025, and 2026, reaching between 150 and 4.500 people per post. Key communications included:

- Announcements of the STEAME Teacher Certification programme launches, webinars on Project-Based Learning, and the certification milestones;
- Posts promoting the EUROMATH & EUROSCIENCE 2025 and 2026 Conferences and the STEAME Academy Symposia;
- Announcement of the first and second STEAME Teacher Facilitators Certification Award Ceremonies;
- Posts about the European STEAME Academies Conference 2026 in Paphos, promoting registration and featuring the detailed conference programme;
- Announcement of the Kick-off General Assembly of the European Federation of STEAME Facilitators Academies in January 2025, and the election of Dr. Gregoris Makrides as its first President;
- Posts informing about the establishment of STEAME Regional Academies in 10 European countries;
- Posts promoting STEAME Academy's participation in the STEM Discovery Campaign 2026;
- Posts sharing the publication of the STEAME Academy Policy Recommendations (D6.1) in April 2026, with individual posts reaching 4.500 people.

P8 (University of Plovdiv) maintained a systematic social media presence through the FMI official Facebook group, with the group reaching approximately 600–800 people per post. Posts promoted webinars, project newsletters, workshop outcomes, the Bucharest meeting, the Porto workshop, certification events, and final conference communications. P8 also maintained the FMI official website as a communication platform, with dedicated articles for each major project milestone.

P9 (University of Barcelona) used X (formerly Twitter) and social media under the Virtual Learning Research Group profile (@UB_GREAV), posting about project activities including face-to-face meetings, webinar invitations, the final conference, and project outputs. Each post reached approximately 200 followers, with a blog post promoting the Bucharest workshop reaching 15.000 people.

P13 (EUROGEO) leveraged its social media communities on Facebook (2.100 followers), LinkedIn (7.800 followers), and X (1.200 followers), reaching approximately 11.200 followers per communication campaign in May, June, September, and October 2024, and publishing a newsletter item about STEAME project developments sent to 11.800 subscribers.

P7 (IKEA) used Facebook to inform the community about the STEAME learning outcomes for teachers and P11 (Ivan Apostolov School) regularly posted on the school's social channels and website about project activities, parent events, and student showcases.

3.2 Newsletters

Newsletters served as a regular, structured communication channel, reaching large subscriber bases of academic, professional, and institutional audiences:

- The STEAME Academy official newsletter, published across multiple issues throughout the project lifecycle, was promoted by virtually all partners through social media reposts and institutional websites. P8 (UPlovdiv) promoted each newsletter issue in the FMI Facebook Group and on the FMI website.
- The D-Learn Newsletter distributed a project feature to 1.200 EU experts.
- A newsletter item introducing the start of the project, sent on 24 January 2024, reached 12.400 subscribers.
- EUROGEO's newsletter (September 2024 issue) reached 11.800 subscribers with STEAME project developments.

In total, newsletter-based communications contributed to reaching tens of thousands of professionals, researchers, and practitioners in the education sector.

3.3 Television and media interviews

Partners engaged with traditional media to reach broader public audiences:

- An interview with Lemesos TV (Cyprus) in November 2024, focused on the STEAME Academy Festival in Cyprus, generated significant local public reach — with an estimated 2,500 spectators from the TV broadcast itself, and 15.000 people reached through the wider interview dissemination.
- A radio interview conducted in March 2024 about modern teaching methodologies in STEAME subjects reached an estimated audience of 500.000 listeners.
- P8 published articles in the University of Plovdiv newspaper, reaching hundreds of students and academics with updates on the project's progress, the Bucharest meeting, and the May 2025 workshops.

3.4 Institutional websites and press releases

Institutional websites were used consistently by several partners to document and publicise project milestones:

- P3 (University of Algarve) and P12 (IPP) published institutional website announcements about project participation, certification programmes, and dissemination events;
- P8 (University of Plovdiv) published regular articles on the FMI official website throughout the project, covering webinar announcements, workshop outcomes, newsletter releases, and final conference promotion;
- P9 (University of Barcelona) published a press release with 700 people reached, and used the UB institutional channels to promote project workshops and outputs;
- P11 (Ivan Apostolov School) maintained a school website article series tracking project deliverables, stakeholder meetings, and student activities.

3.5 Events as communication actions

Beyond dedicated communication channels, partners used events, symposia, conferences, career fairs, and award ceremonies, as powerful communication occasions to raise general awareness of the STEAME Academy project:

- The EUROMATH & EUROSCIENCE Student Conferences in 2024 (Rome), 2025 (Thessaloniki), and 2026 (Paphos) served as major communication platforms, with each edition attracting hundreds of participants from across Europe;
- The Cyprus STEAME Festival (December 2023, November 2024, November 2025) brought STEAME to the attention of more than 1.000 people per edition, combining student, teacher, and public engagement;
- The Stadiodromia 2025 Career Fair in Cyprus, where the CYMS Information Booth reached 200 students and parents;
- Presentations at the International Day of Mathematics in 2025 and at university open days across Spain, Portugal, Poland, and Bulgaria broadened the project's reach into new public audiences.

3.6 Cumulative communication reach

Based on the outcomes reported by partners, the communication actions of the STEAME Academy project reached a very large number of individuals:

- A single radio interview reached an estimated 500.000 listeners;
- EUROGEO's newsletter campaigns reached a combined subscriber base of approximately 11.800 per issue;
- The STEM Film Stories Review and GALA events in June 2024 reached 20.000 and 50.000 attendees and followers respectively;
- Repeated social media campaigns by P13 (EUROGEO) reached 11.200 followers per campaign cycle;
- Individual Facebook posts by P1 later in the project (2025–2026) reached 4.500 people per post, with cumulative reach across dozens of posts totalling hundreds of thousands of impressions.

Taken together, the communication activities of the STEAME Academy consortium resulted in broad, sustained public and professional awareness of the project's goals, outputs, and results across Europe and internationally.

4. EVENTS

Partners organised and participated in 94 events over the course of the three-year project. These events, encompassing workshops, training courses, webinars, conferences, festivals, seminars, summer schools, and focus groups, were the most direct mechanism through which STEAME pedagogy was experienced, tested, and validated by educational communities.

4.1 Overview of events

The 94 recorded events ranged in scale from small focused workshops of 10 participants to major international conferences attracting over 6.000 attendees. They were held across 15 countries and featured a wide range of formats aligned to different learning and engagement objectives.

Table 1: event highlights

Event Type	Notable Examples
Conferences & Symposia	EUROMATH & EUROSCIENCE 2024 (Rome), 2025 (Thessaloniki), 2026 (Paphos); IMEA 2023 & 2024; ICON-EDU 2024
Training Courses & Certification	STEAME Teacher Facilitator Certification Programmes (Nicosia, 2024–2026); STEAME Certification Porto 1
Workshops	STEAME Workshop Porto; Athens Workshop & Roundtable 2025; Interactive STEAME Process Workshops; STEAME PBL Week 3
Festivals & Large Events	Cyprus STEAME Festival 2023 (1,000 attendees), 2024 (1,281 attendees), 2025 (1.187 attendees)

Summer Schools	MATH & STEAME Summer School, Agros, Cyprus (2024: 363 participants; 2025: 319 participants)
Webinars	STEAME Learning Space Webinar; Interactive STEAME Process Webinar; Management of STEAME Environment (UB)
Seminars & Focus Groups	Open Doors Events (Doukas School); Policy Recommendations Focus Groups (Portugal, Romania, Spain)
Meetings	Teacher Academies Meeting, Brussels; DLEARN Network Meeting, Milan; HE Accreditation Agencies Meeting, Botswana

4.2 Flagship events: European STEAME Academy Symposia

The European STEAME Academy Symposia held annually within the EUROMATH & EUROSCIENCE Student Conferences represented the project's most impactful recurring events. Each symposium served simultaneously as a dissemination vehicle, a training platform, and a showcase for STEAME pedagogical practice.

- 2024 Symposium (Rome, March 2024): Over 620 participants, featuring the presentation of the STEAME Academy project and its pedagogical framework to an international audience of mathematics and science educators.
- 2025 Symposium (Thessaloniki, Greece, March 2025): The event attracted 637–652 participants (depending on partner recording), with 200 presentations, 25 workshops, and 10 competitions. The STEAME Teacher Facilitators Competence Framework (D2.4) was presented to educational researchers and doctoral students.
- 2026 European STEAME Academies Conference (Paphos, Cyprus, 12–16 March 2026): The culminating conference of the project, attended by 142 participants at the STEAME-specific conference component, hosted the final physical project meeting and the opening ceremony of EUROMATH & EUROSCIENCE 2026.

These symposia brought together research communities, specific end user communities (teachers, teacher trainers), EU institutions, and innovators, making them comprehensive multi-audience communication and dissemination occasions.

4.3 Cyprus STEAME Festivals

The Cyprus STEAME Festival, organised by P2-CYMS-and P5-EACG, was held three times during the project:

- Cyprus STEAME Festival 2023 (1–2 December 2023, Nicosia): 1.000 attendees in a 2-day flagship event, featuring exhibits, activities, and demonstrations of STEAME education practices.
- Cyprus STEAME Festival 2024 (29–30 November 2024, Limassol): 1.281 attendees (545 males, 736 females), the largest of the three editions.
- Cyprus STEAME Festival 2025 (28–29 November 2025, Limassol): 1.187 attendees (583 males, 604 females), featuring interactive activities and exhibitions of STEAME education.

P10 (Cyprus Pedagogical Institute) actively participated in all three STEAME Festivals, bringing the 'STEAME Decathlon' formative assessment technique as a recurring interactive activity.

4.4 STEAME Summer Schools

The Mathematics & STEAME Summer School, held annually in Agros, Cyprus, was a signature student and teacher camp format offering intensive, immersive STEAME learning:

- July 2024 Summer School: 363 participants (200 males, 163 females) over 15 days.
- July 2025 Summer School: 319 participants over 15 days (two cohorts recorded by different partners), including both students and teacher participants.

P12 (IPP) organized two STEAME Summer Schools in Porto, at PORTIC - Porto Innovation Centre, one of them combined with a STEAME certification training.

These camps offered sustained, deep engagement with STEAME methodology through project-based learning, creativity plans, and interdisciplinary team activities.

4.5 Teacher training and certification events

Teacher training and certification events constituted a defining programme contribution of the project. These events moved beyond awareness-raising to achieve genuine professional development impact:

- European STEAME Teacher Facilitators Certification Pilot (Cyprus, 2024): 50 teachers participated in a competence-based pilot certification programme, culminating in an Award Ceremony on 2 October 2024 attended by 60 people. 32 teachers successfully completed the programme and received a Micro-credential.
- STEAME Teacher Facilitator Certification Programme 2025 (Nicosia, February–July 2025): 72 participants (24 males, 48 females) engaged over 11 training sessions. The programme included: the first in-person meeting at the Pedagogical Institute (52 participants); a PBL Certification (150–160 participants), and the co-implementation of STEAME Learning & Creativity Plans with students (94 participants).
- STEAME Teacher Facilitator Training and Certification Programme 2026 (Nicosia, 14 February 2026): 55 participants (10 males, 45 females), marking significant gender and identity diversity.
- Award Ceremony for the Second STEAME Teacher Facilitators Certification (Nicosia, 17 September 2025): 86 participants.
- STEAME Certification Porto 1 (Porto, Portugal): 13 participants in the first STEAME certification programme run in Portugal, over 5 days.
- STEAME Training Porto (Porto, Portugal): 49 participants.
- STEAME-Academy Workshop on Teacher & Student Assessment – Cyprus: 100 participants.

4.6 Workshops

Workshops were among the most varied event formats, used by nearly every partner to engage teachers, educators, students, and education professionals in hands-on STEAME learning:

- STEAME Workshop in Porto (P12/IPP): 49 participants.
- Athens Workshop & Roundtable (Doukas School, 9–10 October 2025): 24 participants exploring STEAME implementation.
- STEAME-Academy Workshop in Bucharest (January 2025): 49 participants in a two-day workshop preparing for educational change.
- Module 1: STEAME Learning Space Workshop (Nicosia, April 2025): 11 participants.
- Module 5: Interactive STEAME Process Workshops (Athens, October 2025): two parallel sessions with 12 and 17 participants respectively.
- Interactive STEAME Process Workshop (Faro, Portugal, July 2025): 24 participants over 2 days.

- STEAME Education with MILAGE Workshop (Ourém, Portugal, July 2025): 22 participants.
- STEAME Academy Service Teacher Training (Pamporovo, Bulgaria): 10 participants, 2 days.
- STEAME Academy Student Training sessions (Pamporovo and Plovdiv, Bulgaria): 10 and 16 participants respectively.
- Workshops on sustaining and improving the STEAME process (Romania): multiple sessions in Athens, Bucharest, and Paphos.
- STEAME Workshop at the Final Conference (Paphos, March 2026): 10 participants.

4.7 Webinars

Online webinars enabled partners to reach geographically dispersed audiences for training and awareness events:

- STEAME Learning Space Webinar (Module 1), Nicosia, September 2024: 34 participants.
- Online webinar on STEAME LEARNING SPACE, hosted by UKEN (Poland), September 2024: 30 participants.
- Interactive STEAME Process Webinar (Universidade do Algarve): 26 participants.
- Promoting STEAME Active Learning with MILAGE Platform Webinar: 35 participants.
- Management of STEAME Learning Space/Environment Webinar (University of Barcelona, November 2024): 24 participants.
- STEAME Tech Resources and Methods Webinar (P8/Plovdiv, October 2024): 30 participants.
- Strategies for Sustaining and Improving the STEAME Process (Romania, March 2025): 39 participants.
- Feedback and Reflection Empowered by GenAI Webinar (IPP Porto): 30 participants.

4.8 Scientific conferences (partner-hosted)

Several partners organised or co-organised scientific conferences that provided a platform for academic dissemination of STEAME research:

- International Scientific Conference IMEA 2023 (Pamporovo, Bulgaria): 100 participants over 3 days, co-organised by P8/University of Plovdiv.
- International Scientific Conference IMEA 2024 (Pamporovo, Bulgaria): 100 participants over 3 days.
- EUROMATH & EUROSCIENCE 2024 (Rome): 620 participants.
- EUROMATH & EUROSCIENCE 2025 (Thessaloniki): 637 participants.
- EUROMATH & EUROSCIENCE 2026 (Paphos): 358 participants.
- UCEK/ICGE International Congress on Geographical Education (Antalya, Turkey, October 2023): 195 participants (EUROGEO).
- International Geographic Union Congress (Dublin, August 2024): 30 participants (EUROGEO).
- EUROGEO Conference (Porto, May–June 2024): 25 and 140 participants in two STEAME-specific sessions.
- VIII International Mobile Learning Conference of MILAGE (Lisbon): 620 participants.
- ICON-EDU Conference (Alicante, Spain, June 2024): 200 participants.

4.9 Special events: policy focus groups and institutional meetings

As the project moved towards its conclusion, partners organised dedicated policy-focused events to validate and promote the project's policy recommendations deliverable (D6.1):

- Validation of STEAME Policy Recommendations Focus Group (Bucharest, Romania, September 2025): 19 participants (17 females, 2 males).
- Policy Recommendations Focus Group, Portugal (Faro, September 2025): 14 participants.
- Policy Recommendations Focus Group, Portugal (Porto): 20 participants.
- STEAME Policy Recommendations Focus Group and discussion, University of Barcelona, September 2025.
- P11 (Ivan Apostolov School) held a dedicated focus group with 15 teachers, authorities, experts, and researchers to discuss STEAME implementation policy.
- P11 also held a meeting with the Ambassador of Indonesia and their team to discuss collaboration and demonstrate STEAME results.
- The initiatives of P12 (Polytechnic Institute of Porto) in Africa, through the HE Accreditation Agencies Meeting in Gaborone, Botswana (22 participants), and the Transforming Higher Education TAGDev2 programmes in Kampala, Uganda (78 participants) and Blantyre, Malawi (75 participants) demonstrate that the project's reach extended to higher education reform contexts outside EU borders, reflecting the ambitious international dimension of the consortium.

4.10 Attendance summary

The total number of participants across the 94 events recorded exceeds 20,000 individuals. The largest single events by attendance included:

- UKEN Education Day (Krakow, April 2024): 6.000 attendees;
- Cyprus STEAME Festival 2024 (Limassol): 1.281 attendees;
- Cyprus STEAME Festival 2025 (Limassol): 1.187 attendees;
- Cyprus STEAME Festival 2023 (Nicosia): 1.000 attendees;
- EUROMATH & EUROSCIENCE 2024, 2025: 637 attendees each;
- STEAME Academy Symposia 2024: 620 attendees;
- VIII International Mobile Learning Conference (Lisbon): 620 attendees;
- Presentation at Bucharest University (EUROGEO, April 2024): 202 attendees;
- UCEK/ICGE International Congress on Geographical Education (Antalya): 195 attendees.

Gender data recorded across events shows a broadly balanced participation profile, with slightly more female participants overall, consistent with the demographic patterns of the teaching profession in Europe.

5. IMPACT KEY PERFORMANCE INDICATORS

The STEAME Academy project tracked ten Key Performance Indicators (KPI) across six reporting semesters, from June 2023 to May 2026. These KPIs measure the project's impact along five thematic dimensions: teacher engagement and training quality; institutional interest and adoption; conference and certification performance; digital reach and online community building; and media and policy engagement. The final accumulated values alongside an analysis of its evolution along the six semesters of the project lifetime (S1: Jun–Nov 2023; S2: Dec 2023–May 2024; S3: Jun–Nov 2024; S4: Dec 2024–May 2025; S5: Jun–Nov 2025; S6: Dec 2025–May 2026) are discussed here.

Table 2 provides a consolidated overview of all KPI, their principal accumulated results, and the overall trend observed across the three-year implementation period.

5.1 Project added value and effectiveness

The analysis of the ten KPI (Table 2) demonstrates that the STEAME Academy project achieved or exceeded its targets in most of the dimensions monitored. Importantly, the results should not be interpreted only in terms of the volume of dissemination activities or participation figures, but also in terms of the project's capacity to generate engagement, institutional interest, professional development, cooperation and the conditions for longer-term uptake of the STEAME approach. The KPI monitoring covered the six semesters of the project, from June 2023 to May 2026.

The strongest performance was observed in teacher engagement and training. The project registered 520 teachers in STEAME training activities, comprising 389 in-service teachers and 131 student teachers, compared with a cumulative benchmark of 300 registrations based on the semester target of 50 participants. This represents approximately 173% of the cumulative target. Moreover, the quality evaluation of the training activities remained very high, with 89.75% satisfaction among in-service teachers and 100% among student teachers, above the target of 80%. These results indicate that the project was not only successful in attracting participants, but also in providing training activities that were perceived as relevant and valuable by the intended beneficiaries.

The project also generated substantial institutional and organisational interest. The 110 expressions of interest in STEAME curricula considerably exceeded the cumulative benchmark of 30 based on the semester target of five. However, the conversion of this interest into documented curriculum adaptation remained limited, with one HEI having adapted modules. This distinction is important from an impact perspective: it shows that the project succeeded in generating awareness and demand among institutions, while also highlighting that institutional adoption requires longer timeframes and organisational processes extending beyond the duration of the project. Thus, the result provides evidence of strong potential for exploitation, while also identifying an area requiring continued post-project support.

The European STEAME conferences were another major success. The project reached 1.755 attendees, against a cumulative benchmark of 600 based on the semester target of 100, corresponding to approximately 293% of the target. In addition, 1.421 expressions of interest were recorded. The strong peaks associated with the successive conference cycles demonstrate the ability of the project to mobilise large and diverse communities around STEAME education.

The Teacher Facilitator Certification results require a more nuanced interpretation. While 76 certificates were ultimately issued, below the cumulative numerical benchmark of 240 implied by the semester target of 40, the certification process generated 181 applications and 321 expressions of interest. The progressive growth across certification cycles indicates increasing recognition of the certification pathway, even though the number of completed certifications did not reach the original quantitative benchmark. The results therefore demonstrate substantial demand and the establishment of a functioning certification mechanism, while also suggesting that conversion from interest and application to completed certification should remain a priority for future exploitation.

Table 2: Key Performance Indicators

KPI	Impact area	Target per semester	Reached, semestral average	Reached, accumulated over 3 years	Trend
1.a	Teacher participation in STEAME training	50	86,7	520 teachers registered (389 service + 131 student)	Steady growth, peaking in S4 (Semester 4)
1.b	Workshop quality evaluation	> 80%	95%	89.75% satisfaction (service); 100% (students)	High quality maintained
2	HEI interest in STEAME curricula	5	18,5	110 expressions of interest; 1 HEI adapted modules	Concentrated in S1 & S4
3	European STEAME Conference	100	821,5	1.755 attendees; 1.421 interest expressions	Strong biennial spikes (S2, S4, S6)
4	Teacher Facilitator Certification	40	96,3	76 certificates issued; 181 applicants; 321 expressions	Progressive growth across cycles
5	Federation membership (regions)	3	3,3	15 registered members (regions & authorities)	Foundational in S2, steady thereafter
6	Exploitation Associate Partners	3	65,8	307 HE/org. cooperating; 88 interest expressions	Rapid scaling from S4 onwards
7.a	Project website engagement	1.000	17.733,3	106.400 total page views	Consistent growth each semester
7.b	STEAME Observatory users	500	76	228 registered users, in 3 months	Launched S4, strong in S5
8	Social media engagement	100	693,7	4.162 interactions (likes, comments)	Consistent and sustained
9	Media coverage	10	4,7	28 journalist articles/media items	Steady presence; 8 in S1 (launch)
10	Policy maker engagement	10	2,5	15 expressions of interest	Concentrated at project launch (S1)

The networking and exploitation dimension was particularly strong. The project established 15 federation members against a cumulative benchmark of 18, representing a result close to the target, while 307 higher education institutions and organisations cooperated as exploitation associate partners, greatly exceeding the cumulative benchmark of 18. This is particularly relevant to project added value because it demonstrates that the project created a network extending substantially beyond the original consortium. The rapid scaling observed from the fourth semester onwards also indicates increasing external engagement as the project outputs and activities became more mature.

Digital engagement was one of the clearest areas of effectiveness. The project website generated 106.400 page views, substantially exceeding the cumulative benchmark of 6.000. Social media generated 4.162 interactions, compared with a cumulative benchmark of 600. The STEAME Observatory, launched during the project, attracted 228 registered users within its first three months. Although the Observatory figure should be interpreted in the context of its shorter period of operation, it provides an early indication of stakeholder interest in the project's digital resources.

Two indicators, media coverage and policy-maker engagement, did not reach their quantitative targets. The project generated 28 media items against a cumulative benchmark of 60, while 15 policy-maker expressions of interest were recorded against a benchmark of 60. These results should not be interpreted as an absence of impact. Rather, they indicate that the project's strongest channels of influence were professional, institutional, educational and digital communities rather than conventional media or sustained policy engagement. The policy-focused activities organised towards the end of the project, including dedicated focus groups to validate the policy recommendations, demonstrate that the consortium nevertheless created mechanisms for policy dialogue and validation.

Overall, the comparison against targets demonstrates that the project was highly effective in generating professional engagement, institutional interest, cooperation, conference participation and digital visibility, while achieving more moderate results in formal certification completion, media penetration and sustained policy-maker engagement. Its added value lies particularly in the combination of these dimensions: the project did not merely disseminate a conceptual approach, but established training and certification mechanisms, developed communities of practice and institutional cooperation, supported curriculum interest, created an Observatory, and connected educational practitioners, researchers, HEIs, schools and other stakeholders around a common STEAME framework. This is consistent with the evidence that the project moved beyond dissemination towards educational transformation, including strengthening interdisciplinary teaching practices, supporting innovation in teacher education and promoting creative and inclusive pedagogies.

The European and international dimension further reinforces this added value. Activities and collaborations extended beyond the immediate project partnership and beyond Europe, demonstrating the transferability of the STEAME approach across different educational and socio-cultural contexts. The resulting combination of validated methodologies, educational resources, trained and certified educators, institutional partnerships and stakeholder networks constitutes an important project legacy that would not have been achieved through isolated dissemination activities.

5.2 Evidence of project impact

The KPI framework provides evidence of impact at several interconnected levels: individual, institutional, network, digital and policy levels. This multi-level perspective is important because the impact of an educational innovation such as STEAME cannot be adequately captured through participation numbers alone. The indicators therefore provide evidence not only of reach, but also of

stakeholder interest, quality, engagement, cooperation and the creation of structures capable of sustaining project results.

At the individual level, teacher participation and training quality provide the strongest evidence of immediate project impact. The registration of 520 teachers, together with very high satisfaction scores, demonstrates both reach and perceived value. The distinction between 389 in-service teachers and 131 student teachers is particularly significant, as it shows that the project addressed both current practitioners and the next generation of teachers.

At the institutional level, the fact that one HEI had already adapted modules provides evidence of actual uptake, rather than interest alone. At the same time, the gap between expressions of interest and documented curriculum adaptation highlights the difference between awareness, intention and institutional adoption. This is a relevant impact finding in itself, as curriculum change normally requires institutional approval, alignment with existing programmes and sustained staff engagement, processes that may extend beyond the project's funding period.

At the professional-network level, the 307 HEIs and organisations cooperating as exploitation associate partners demonstrate the project's capacity to mobilise actors beyond the consortium. Together with 15 registered federation members, these figures indicate that the project established the foundations of a broader STEAME ecosystem. This is particularly important for sustainability because exploitation and institutional networking create pathways through which project outputs can continue to circulate and be adopted after project funding ends.

At the educational practice level, the Teacher Facilitator Certification is a particularly relevant impact indicator because it represents a transition from dissemination of STEAME concepts to formal recognition of competences. Although the number of certificates issued did not reach the original quantitative benchmark, the 181 applications and 321 expressions of interest demonstrate significant demand for the certification pathway. The progressive growth across certification cycles also suggests that the model gained visibility and acceptance during implementation.

At the digital level, website engagement, social media interactions and Observatory registration provide evidence of sustained stakeholder interest beyond physical events. The 106.400 website page views and 4.162 social media interactions substantially exceeded the corresponding targets. More importantly, the Observatory introduced a project infrastructure through which resources and knowledge remain accessible beyond the lifetime of the project. The digital indicators therefore contribute not only to measuring communication reach but also to assessing the project's potential for continued exploitation and sustainability.

At the policy level, the quantitative indicator of policy-maker engagement produced a more limited result, with 15 expressions of interest against the target of 60. However, the project complemented this indicator with qualitative engagement mechanisms, including policy-focused events designed specifically to validate and promote the policy recommendations. Three such focus groups were organised in Romania and Portugal during September 2025, involving 19, 14 and 20 participants respectively. This suggests that policy impact should not be assessed exclusively through the number of expressions of interest. The existence of structured validation and dialogue activities provides evidence that the project created opportunities for its recommendations to be discussed with relevant stakeholders, even if broader policy uptake cannot yet be demonstrated.

Similarly, the media indicator should be interpreted primarily as an indicator of external visibility rather than educational impact itself. The 28 media items recorded are below the quantitative target, but the project achieved much stronger results through professional networks, conferences, training activities, institutional cooperation and digital channels. This distribution of impact is consistent with the nature

of the project, whose principal intended beneficiaries and multipliers were teachers, teacher educators, HEIs, schools and educational stakeholders rather than the general public. The evidence base therefore suggests that the project reached many of the actors with the greatest capacity to apply and reproduce the STEAME approach.

Taken together, the indicators demonstrate a progression from awareness and participation towards engagement, capacity building, institutional cooperation and exploitation, that is, impact. The evolution of the indicators across the six semesters is particularly relevant: teacher participation increased over time; certification developed progressively across successive cycles; exploitation partnerships scaled rapidly from semester S4 onwards; and website engagement grew consistently throughout implementation.

Consequently, the KPI analysis provides evidence that the project's impact extends beyond dissemination and participation. The project contributed to the development of teacher competences, created a structured pathway for professional recognition, generated institutional interest in curriculum integration, established cooperation and exploitation networks, developed digital infrastructure, and created mechanisms for policy dialogue. The strongest evidence concerns the project's ability to create an ecosystem around STEAME education rather than simply disseminate individual project outputs. This ecosystem, comprising trained educators, prospective and current teacher educators, HEIs, schools, researchers, professional networks, digital resources and policy stakeholders, constitutes the principal basis for the project's longer-term impact and sustainability.

Overall, the KPI evidence supports the conclusion that STEAME Academy was effective in achieving substantial impact in its core areas of intervention, while also identifying specific areas where impact remains developmental rather than fully realized – most notably formal certification completion, curriculum-level institutional adoption, media reach and sustained policy engagement. This distinction strengthens rather than weakens the impact assessment, as it demonstrates that the project has assessed not only its achievements but also the conversion of outreach into deeper forms of uptake and the areas requiring continued exploitation after the end of the funded period.

6. CONCLUSION

The STEAME Academy project successfully achieved a significant European and international impact through a comprehensive and multidimensional dissemination and communication strategy guided by the Impact and Dissemination Plan drafted during the initial months of the project. The project created a strong and sustainable ecosystem connecting teachers, researchers, higher education institutions, schools, policy makers, educational authorities, and civil society organisations around a shared vision for innovative STEAME education.

Throughout the project lifetime, the consortium implemented an extensive portfolio of high-impact dissemination and engagement activities, including conferences, festivals, workshops, webinars, certification programmes, summer schools, scientific publications, policy dialogues, and digital communication campaigns. These initiatives collectively reached more than 20.000 participants and generated substantial visibility for the project and its educational outputs.

One of the project's most important achievements was the establishment and validation of the STEAME Teacher Facilitators Certification framework, which provided structured professional development opportunities and competence-based recognition for educators. The certification

programmes, together with the workshops and training activities implemented across multiple countries, demonstrated the practical applicability and scalability of the STEAME methodology in diverse educational contexts.

The project also demonstrated strong performance in digital dissemination and community building. The continuous growth of website engagement, social media interaction, and online participation reflects the consortium's ability to maintain visibility and stakeholder engagement throughout the project duration. The creation of the STEAME Observatory and the expansion of the project's online communities provide an important foundation for the sustainability and continued exploitation of project results beyond the funded period.

The KPI results confirm the project's success across all major impact dimensions, including teacher participation, institutional interest, certification uptake, social media engagement, and collaboration with exploitation partners. The project exceeded expectations in several areas, particularly regarding teacher training participation, conference attendance, institutional cooperation, and online visibility.

Importantly, the STEAME Academy project succeeded in moving beyond dissemination towards genuine educational transformation. The activities implemented by the consortium contributed to strengthening interdisciplinary teaching practices, supporting innovation in teacher education, promoting creative and inclusive pedagogies, and encouraging institutional reflection on future-oriented educational approaches. The active engagement of policy makers, educational authorities, and international stakeholders further increased the relevance and sustainability potential of the project outcomes.

The project's international dimension also represents a major added value. Through collaborations and dissemination activities extending beyond Europe, including initiatives in Africa and engagement with international educational organisations, the consortium demonstrated the broader relevance and transferability of the STEAME approach in different educational and socio-cultural contexts.

In conclusion, the STEAME Academy project has established a strong legacy for future cooperation, innovation, and policy development in STEAME education. The project leaves behind a robust network of engaged stakeholders, validated educational methodologies, sound didactical materials, certified educators, institutional partnerships, and dissemination channels that can continue to support the advancement of STEAME education well beyond the formal end of the project.

Annex I – Key Performance Indicators measurements along project timeframe

KPI	Measure	Source	Type	3 years	Jun23-Nov23	Dec23-May24	Jun24-Nov24	Dec24-May25	Jun25-Nov25	Dec25-May26
1.a Interest of teachers – service teachers and student teachers – to participate in the STEAME training workshops and measuring	Number of service teachers registered to STEAME training workshops	Registration records in online forms or attendance lists	Integer (non-negative)	389	---	49	45	143	112	40
	Number of student teachers registered to STEAME training workshops	Registration records in online forms or attendance lists	Integer (non-negative)	131	---	---	---	101	16	14
1.b evaluation of STEAME training workshops by participants	Overall perception of service-teacher participants of the quality of the STEAME training workshops in percentage of maximum quality (quality to be defined for each evaluation questionnaire)	STEAME workshops evaluation questionnaires.	Percentage (0 - 100)	90%	---	80%	---	100%	---	---
	Overall perception of student-teacher participants of the quality of the STEAME training workshops in percentage of maximum quality (quality to be defined for each evaluation questionnaire)	STEAME workshops evaluation questionnaires.	Percentage (0 - 100)	100%	---	---	---	100%	---	---

	defined for each evaluation questionnaire)									
2. Interest of HEIs to adapt the STEAME curricula and modules.	Number of manifestations of interest of HEI willing to adapt the STEAME curricula and modules	Email, social media posts and other forms of communication with stakeholders	Integer (non-negative)	110	52	20	11	25	---	2
	Number of STEAME curricula and modules adapted by HEI	the adapted curricula and modules	Integer (non-negative)	1	---	---	---	---	---	1
3. Interest generated for participating in the European STEAME Teachers Conference.	Number of manifestations of interest to participate in the European STEAME Teachers Conference	Email, social media posts and other forms of communication with stakeholders	Integer (non-negative)	1,421	238	392	10	677	21	83
	Number of registered participants	Registration records in online forms or attendance sheets	Integer (non-negative)	1,753	---	614	0	637	2	500
	Number of participants attending the conference in person and online	Attendance lists	Integer (non-negative)	1,755	---	614	0	637	0	504
4. Interest of teachers to apply for certification on STEAME curricula and modules.	Number of manifestations of interest to apply for STEAME Teacher Facilitator certification	Email, social media posts and other forms of communication with stakeholders	Integer (non-negative)	321	5	50	45	156	33	32

	Number of applicants for STEAME Teacher Facilitator certification	Registration records in online forms or attendance sheets	Integer (non-negative)	181	---	---	49	---	75	57
	Number of certificates issued	Issued certificates	Integer (non-negative)	76	---	---	32	---	44	0
5. Interest of regions and authorities to become members of the European Federation of STEAME Teacher Academy with the momentum in creating such an Academy in their area.	Number of manifestations of interest of regions and authorities to become members of the European Federation of STEAME Teacher Academy	Email, social media posts and other forms of communication with stakeholders	Integer (non-negative)	5	1	---	---	3	1	0
	Number of registered regions and authorities as members of the European Federation of STEAME Teacher Academy	Registration records	Integer (non-negative)	15	---	12	---	1	1	1
6. Interest of higher education institutions (HEI) to cooperate and create STEAME Teacher Academies within a network.	Number of manifestations of interest of HE and other organisations to cooperate as Exploitation Associate Partner	Email, social media posts and other forms of communication with stakeholders	Integer (non-negative)	88	---	---	---	88	---	---
	Number of HE and other organisations cooperating as Exploitation	STEAME Teacher Academy registration records; attendance lists of meetings and	Integer (non-negative)	307	---	---	---	87	107	113

	Associate Partner	cooperation events								
7.a Visits to the project's website	Number of page views on the project website	Website traffic metrics (depends on the website implementation)	Integer (non-negative)	106,400	2,800	9,900	19,200	21,500	24,000	29,000
7.b users of the European STEAME Observatory.	Number of users registered to the European STEAME Observatory	Registration records	Integer (non-negative)	228	---	---	0	57	107	64
8.Reaction to Social Media communication.	Number of comments, likes and dislikes about social media posts	STEAME project social media platforms	Integer (non-negative)	4,162	269	864	803	683	777	766
9.Interest and articles written by journalists about the project's results that will be developed.	Number of articles, ads and other comments written by journalists about project results	Social media, online press, email, printed press, media	Integer (non-negative)	28	8	4	3	4	6	3
10.Interest generated by educational policy makers and their comments on the project.	Number of critics, comments, and other manifestations of interest by educational policy makers	Social media, online press, email, printed press, media	Integer (non-negative)	15	15	---	---	---	---	---

P6 (21-22.09.2023) Conference presentation	Un-Bordering Disciplinarity. Trans-/Cross-/Post-Disciplinary Approaches to Humanities and Social Sciences, VI th edition. International Conference hosted by The Teacher Training Department and The Department of Modern Languages and Business Communication, Spiru Haret University, Bucharest, in collaboration with St. Kliment Ohridsky University, Bulgaria and the Research Group "Habilidades comunicativas e interculturales en lengua extranjera (Communicative and Intercultural Skills in Foreign Languages)", University of Valladolid, Spain. The study of humanities and social sciences encompasses various disciplines, including languages, philosophy, multicultural studies, psychology, history, anthropology, sociology etc. Traditionally, these disciplines have operated within their own boundaries, employing specialized methods and frameworks. However, in recent years, there has been a growing recognition of the need for transdisciplinary, crossdisciplinary, and postdisciplinary approaches to better understand the complex nature of human experience. Our conference aimed to explore and compare these approaches within the context of humanities and social sciences, highlighting their significance, benefits, and challenges. By transcending disciplinary boundaries and integrating diverse perspectives, these approaches offer unique opportunities for a more holistic and dynamic understanding of human beings and their intricate relationship with the world.
